

PACKAGED DISTILLATION SYSTEMS

Our experience spans both batch and continuous type packaged, skid mounted modular systems in a variety of process applications.

The following process methods are among those readily available to provide economically reusable solvent products.

- Steam stripping
- Air Stripping
- Evaporation
- Binary fractionation
- Azeotropic distillation
- Extractive distillation
- Liquid-liquid extraction
- Liquid phase adsorption

RAYSOLV has a combination of over 50 years experience in designing, fabricating, installing and operating distillation systems.

Our unique combination of technical experience with carbon adsorption and distillation technologies enables us to provide you with a truly optimized and integrated installation.

900 lb/hr. Isopropyl Acetate/Isopropanol package distillation system, 316 SS with automatic stripping and process heat recovery.
